

The success of the Evolution RGB spreads!

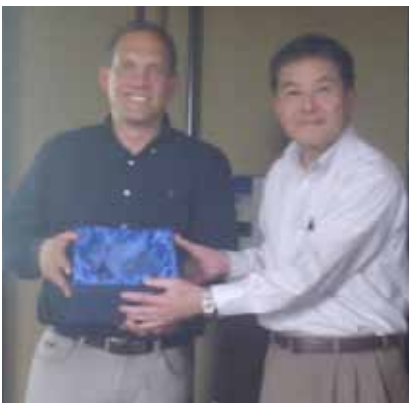

Satake's Evolution RGB4

• News • News • News • News • News • News • News • News

While continuing to set new standards of quality, flexibility and ease of use across the seed industry, the full colour sorter Evolution RGB has now been introduced into the highly competitive Spanish almond market. Processors of almonds in California, the n°1 producing region in the world, have already experienced the benefits of the Evolution RGB over other technologies including laser and have been using the EVO RGB for several years with full

satisfaction. Almonds processors in Spain have done their homework and Satake's distributor Maseto will equip Spanish processors with this new generation of optical sorting equipment.

Recent EVO RGB sales in UK, France, Germany, Poland, Austria, Hungary, Romania and Turkey demonstrate the unique capabilities for seed, cereals, coffee and plastics.

Lars Ruttmann receives "Outstanding Sales Achievement" from Vice-President Harry Harada

News of the Group

SATAKE Europe held their annual sales meeting in Hamburg, Germany in July hosted by Satake's German agent, Lars Ruttmann. Delegates discussed & participated in presentations and other award winners included Techmach Technology (South Africa) and Magdalena Gold (Hungary). New agents to the Satake family include:

Rice success in Africa!

• News • News • News • News • News • News • News

In July 2013, Satake Europe signed the contract with Olam Nigeria for a new 12 tph parboiled paddy rice mill to be built at Ondorie in Nasarawa State, Nigeria, with installation expected to begin in January 2014. Featuring a 5 pass rice whitening section, the new mill includes 2 x **SSM5001AMS** Colour Sorters as part of the quality and blending system.

This follows on from the recent sales of 3 x 5tph rice mills sold to Ebonyi State Government which are now being installed and commissioned. Using locally sourced parboiled paddy, each of **these 3 mills feature a GS8820AIS which has given excellent sorting results with very low good grain contamination in rejects**, and results far in excess of that expected or required by a very satisfied customer....'

One of the mills was officially opened by the State Governor, Martin Elechi, and coverage made the State TV news, so some good free publicity for Satake !!.....'

Responsible for the order:
Phil Reader – Satake Rice Milling Manager
